Executive Summary – Ferns and Petals (FNP) Sales Analysis

The Ferns and Petals (FNP) Sales Analysis project aims to evaluate overall sales performance, customer purchasing behaviour, product popularity, and order delivery efficiency using Excel dashboards and data visualization. The analysis is based on 1,000 orders, supported by customer and product datasets, to identify business trends and opportunities for improving revenue and customer satisfaction.

The dashboard reports **total revenue of ₹35,20,984**, with an average order value of **₹3,520.98** and an average order-to-delivery time of **5.53** (the time unit should be confirmed). The monthly sales analysis indicates fluctuations throughout 2023, with February recording the highest revenue, followed by June, while April shows a notable decline. Revenue by occasion highlights Anniversary and Raksha Bandhan as strong revenue-generating occasions, demonstrating the importance of occasion-based marketing strategies.

At the product category level, Soft Toys contribute the highest revenue, followed by Sweets and Colors. The product analysis identifies the Magam Set as the leading product among the displayed top five products by revenue. The city-wise order analysis shows Kavali recording the highest order count among the displayed cities, indicating a potential area for targeted marketing and customer acquisition.

Overall, the analysis provides a foundation for data-driven business decisions. FNP can focus on high-performing occasions and product categories, investigate monthly sales declines, strengthen marketing in promising cities, and improve delivery efficiency. Further analysis of product popularity by occasion and the relationship between order quantity and delivery time would help refine inventory planning, promotional campaigns, and customer service strategies.

Business Recommendation: Prioritize occasion-specific promotions, optimize inventory for high-revenue products, investigate low-performing sales periods, and monitor delivery performance to support sustainable revenue growth and improved customer satisfaction.
